

Instructions For Using Fungus Pharm Concentrate:

Mix 4 parts water to 1 part Concentrate.

Water well in the AM, day of treatment. Late in the day, as close to dusk as possible, spray a fine even mist of Fungus Pharm dilution on leaves, top and bottom, stems and in the case of blackspot, the soil surrounding the plant base.

To prevent powdery mildew, weekly applications are suggested. However, depending on your locale and weather, reduced frequency of applications may work. When spraying preventively, a dilution of 6 or 8 to one may work as well.

Please tell us your success stories.

Best regards,

The Staff at Pharm Solutions Inc.
